

The app is initialized with 3 users:

User1: initialized with 3 images in their inventory: Dog, Cat and Mouse

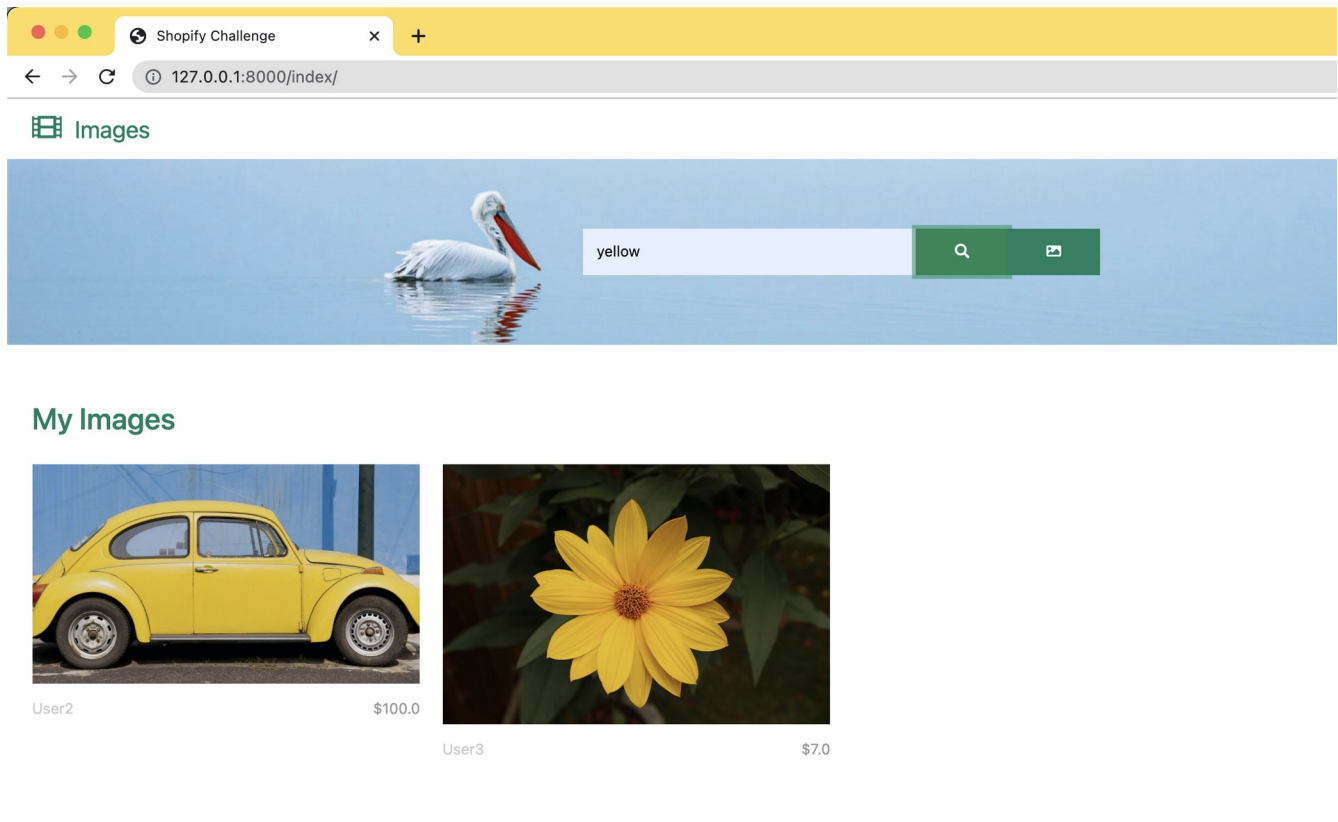

User2: initialized with 1 image in their inventory: Car

User3: initialized with 1 image in their inventory: Flower

The user of the application starts the application as User1 and views their inventory as the home screen.

From there, the user can use the text field to search for images by keywords.

The user can also upload an image to search for similar images (powered by Google Vision API)
